Diversified exposure

Bloomberg's commodity indices are a family of financial benchmarks designed to provide liquid and diversified exposure to physical commodities via futures contracts. Flagship products include the Bloomberg Commodity Indices (BCOM), Bloomberg Enhanced Roll Yield Indices (BERY), UBS Bloomberg CMCI Indices (CMCI), Bloomberg Energy & Metal Equal-Weighted Indices, and Bloomberg Single Commodity & Agriculture Representative Indices.

Bloomberg Enhanced Roll Yield Indices

A key concern for commodity investors is negative yield from the shape of futures' curves, which contributes to return degradation over extended periods. Bloomberg addresses this concern with **BERY**, a broad-based, long-only commodity benchmark that extends the BCOM family, while incorporating aspects of risk-premia strategies. BERY diminishes the traditional trade-off between liquidity and performance by redefining the index weighting scheme and diversifying contract selection. Ultimately, BERY seeks to provide high capacity, mitigate the impact of negative carry and reduce roll congestion.

UBS Bloomberg CMCI Indices

The UBS Bloomberg CMCI Index family was developed to track real performance of commodity prices. It's the first commodity index to use up to five constant maturities and maintain broad-based diversification across 29 commodity futures contracts. A balanced weighting of all available maturities (from three months up to three years) for each commodity provides time diversification, which traditional indices neglect.
