TIMBREN SES SUSPENSION ENHANCEMENT SYSTEM SKU# DR1500DQ - REAR KIT

Suspension Rubber Helper Spring Kit

(0) Reviews: Write first review

SKU: **DR1500DQ**

We've engineered our hollow rubber springs to deliver a progressive spring rate. In other words, the more weight that pushes down on the rubber springs the harder they work to prevent rear end sag. Whether you're pulling a trailer or carrying a heavy load in the bed of your truck, our hollow rubber springs adjust automatically to keep the vehicle level at all times.

This SES Suspension Upgrade replaces the jounce stop on the frame. Its unique design ensures superb ride quality – loaded or unloaded. (There should be a 1/2" to 1 1/2" gap between rubber spring and axle to ensure unloaded ride quality.) Unlike other auxiliary spring systems, the SES Suspension Upgrade guarantees the best of both worlds.

DR1500DQ replaces the bumpstops on the rear suspension of the 2009-2021 RAM 1500 2WD and 4WD pickup truck models with crew cab and quad cab.

This kit is rated at 8600 lbs capacity. Even though you're increasing the spring rate by adding this upgrade, this does not increase the GVWR (Gross Vehicle Weight Rating). Please make sure that the load does not exceed the GVWR set by the manufacturer.

Free ground shipping to lower 48 states (some exclusions may apply)
