Clinical Case Reports

The Archimedes® Lite™ Virtual Bronchoscopic Navigation System, also known as LungPoint Plus® in Asia Pacific regions, is a simple, yet elegant virtual bronchoscopic navigation system that leverages the advanced navigation technology from Archimedes without fluoroscopy. Archimedes Lite is the only pulmonary navigation system that provides compatibility with any bronchoscope allowing for direct access to the lung periphery with NO dedicated procedure consumables, resulting in lower procedural costs. The clinical flexibility and low total cost of ownership make Archimedes Lite an ideal fit within any clinical practice.

The Archimedes Lite System became available for commercial use in the U.S., EU, and the PRC in February 2021. The Archimedes Lite System is classified as Class II medical device by the FDA, as a Class IIa medical device in the EU, and as a Class III medical device by the NMPA.
