Some AIM Clinics are experiencing weather delays. [Learn more.](#)

Your child's future is full of hope.

When a child has autism, small changes can add up to big victories. AIM Clinics employs a method with decades of testing and results behind it. It's called Applied Behavior Analysis (ABA), and it works.

AUTISM THERAPY ABOUT AIM PROGRAMS LOCATIONS CONTACT US

Better ABA. Better outcomes.

AIM Clinics fosters a better ABA environment for our kids and our therapists, with smaller caseloads, industry-leading low turnover rates, rigorous thought leadership and empowering professional development opportunities.

1. The Council of Autism Service Providers (CASPs)

The four pillars of our clinical approach lead to great outcomes—for our clients, our team and our community.

Quality →
Engagement
Commitment
Investment

We believe that what's good for our clients is also good for our therapists. We keep our caseloads small to ensure quality care, and also to keep our therapists performing at their best—and promote time for professional growth and development. We know that many clinicians want more opportunities for professional development (Blydenberg and Diller, 2016), and it's our goal to meet and exceed this expectation to promote clinical excellence.

Each of our Board Certified Behavior Analysts (BCBAs) works with an average of 8 clients at a time, meaning they can be more intimately involved in each child's treatment.

AIM treatment teams include a BCBA and 3-4 highly trained Registered Behavior Technicians (RBTs), as well as senior leadership who review each plan on a regular basis.

We believe our commitment to our clients, our community and our AIM team, coupled with the quality of services we provide, puts us in a class all our own and gives the kids we serve—and our therapists—more opportunities to excel.

AIM Journal Club

Better research starts with better knowledge.

An integral part of bringing the best care to our clients is staying up to date on the latest research. In 2019-2020, we read 24 articles in our AIM Journal Club, which is modeled after the research of Parsons and Reid (2011) and Sarno (2013).

- Each month 3-4 peer-reviewed journal articles are selected for BCBAs to read and discuss.
- Articles span education, applied behavior analysis, organizational behavior management and psychology.
- Small groups meet across the organization virtually to engage in a semi-structured discussion of the article and how the article could apply to clinical work at AIM.

Find the Right Program

ABA therapy is an effective, evidence-based treatment for kids and teens on the autism spectrum. We offer three age-specific programs designed to meet all skill levels and needs, and give children the support they need to accomplish their goals.

GET STARTED ►

Early Learners ABA Treatment Program

For children ages 2-6

Our intensive Early Learners ABA Treatment Program is a full-day program designed to equip kids ages 2-6 with the foundational skills they need to succeed in a school environment.

LEARN MORE ►

After School ABA Treatment Program

For children ages 5-18

Our After School ABA Treatment Program helps children and teens learn to make new friends, regulate their emotions, improve communication skills and more.

LEARN MORE ►

Young Adult ABA Treatment Program

For anyone 17+

Our Young Adult Treatment Program helps young people on the spectrum improve their social, hygiene and daily living skills while preparing them for a post-academic future.

LEARN MORE ►

Program eligibility

Your child has been diagnosed with autism spectrum disorder by a doctor

Your child is between 2 and 21 years old

Your child is able to attend their treatment program every day and meet minimum treatment hour requirements

You recognize that ABA works best when therapy is consistent and intensive

You are eager to learn and employ ABA therapy strategies at home

You are able to attend a monthly ABA training course at the clinic

What are the steps to starting therapy?

We do our best to make the application and insurance processes easy.

Step 1

Fill out our enrollment form

Step 2

Send us your child's diagnosis

Complete these steps and our intake team will be in touch for next steps for autism therapy services for your child.
