

# Dive Into the Future of Highly Efficient AI Edge Computing

Discover how you can maximize performance, simplify the SoC design process, and debug after silicon today.

## ENLIGHT

Discover a deep learning accelerator that accelerates inferencing computation with excellent efficiency and unmatched compute density.

## ORBIT

Get to know the ORBIT Memory Subsystem IP that consists of an interconnect, memory controller, and PHY IPs that work in unison to create maximum system synergies.

## AI Computing Platform IP

Optimize your SoC's performance and reliability with our high-performance memory system IP and AI accelerator

- NPU IP
- ORBIT Interconnect
- ORBIT Memory Ctrl
- ORBIT PHY
