About this talk

If we were to believe in data, beware, there were 1,767 publicly reported breaches in the H1, 2021, which exposed a total of 18.8 billion records. Attackers are innovating faster; becoming fiercely lethal. In the times when business resilience is a top priority of the CEO and the Board, organizations - of any size, shape, or significance - have one fundamental question to answer: "How secure are they right now?" Unfortunately, there is no definite answer to this question. However, a conversation with experts pioneering niche innovations in this space can help you! DynamicCISO, in partnership with Safe Security (formerly Lucideus Tech), invites you to view our session on "Breach Likelihood: How Secure Are You?" Key Takeaways: - The Global and Local Breach Scenarios - Digital Business Risk Quantification - Getting a Mathematical Scorecard - Methods to Develop a Robust Breach-proof Environment
