PROVIDING STEVEDORING, HANDLING, STORAGE SERVICES, AND TRANSPORTATION FOR BULK, BREAK BULK CONTAINERS AND SPECIALTY CARGO

Ambassador Services International has the ability to meet your cargo handling and storage needs, ensuring you the best turnaround times with proven experience and innovative equipment.

With our team of professionally trained operators and personnel using new technologies, we can provide excellent quality control while cutting costs without cutting corners on superior standards.

Ambassador Services International is invested in keeping your business moving by land and by sea.

REFRIGERATED CARGO HANDLING

Among Ambassador's vast storage capacity is 280,000 square feet of refrigerated warehouse space, the largest waterfront refrigeration and freezer storage in the Southeast. Our refrigerated space features 13 different temperature zones. We also offer power connections for individual refrigerated containers.

We have covered truck loading docks throughout our facility at Port Canaveral. Our capacity allows us to house large quantities of perishable

items such as fresh fruit, juice products, vegetables and peanuts. We are also a bonded warehouse with U.S. Customs.

BREAK BULK HANDLING

In addition to container handling, Ambassador Services also handles break bulk – (large cargo that is not enclosed in a container). Among the break bulk items we handle are fruit, juice in bins and drums, newsprint, lumber, wood pulp, steel, and Super Sacks.

We have some of the best production rates in the United States, unloading cargo at impressive speeds during around-the-clock operations. After unloading cargo, we can distribute cargo via any inter-modal means necessary. We also bag bulk items, such as fertilizer and salt, and put them on pallets to ship.

BULK HANDLING

Ambassador Services handles large amounts of bulk cargo, including slag, fertilizer, salt varieties, and ferrous ore.

We have some of the best production rates in the United States- unloading cargo at impressive speeds during around-the-clock operations. During slag operations, for instance, we use excavators in ships' holds to loosen the cargo and speed up unloading. Our first-class, certified crane operators expedite discharges, and the use of a telescopic radial stacker and conveyor further streamlines our operations.

We have the ability to stack weather-sensitive cargo in our warehouses. This includes fertilizers, chemical salt and ferrous ore. We also have two bagging facilities that allow us to create a palletized, break bulk product from bulk cargo.

ROLL ON/ROLL OFF CARGO HANDLING

Ambassador Services offers RO/RO — or roll on/roll off — cargo handling. This is cargo that can be rolled on or off a ship, such as cars, trucks, motorized or trailered cargo, and military equipment.

Ambassador Services has the ability to handle thousand units a month with our over 24 acres of secure storage for RO/RO cargo.

RAIL TERMINAL ACCESS

Complementing its shipping and trucking business, Ambassador Services has a rail terminal with a reach from Florida and the Southeast, to across North America.

Products we move by rail include slag, fertilizer, plastic pellets, crane pads, lumber, drywall, newsprint, plywood and Super Sacks.

SPECIALTY AND PROJECT CARGO

Ambassador Services has the ability to handle a variety of specialty cargoes. Handling aerospace cargo, power plant equipment, gangway structures, rocket housings; Ambassador's more unusual cargo transport has included a replica space shuttle, and Shamu the killer whale, for SeaWorld.

RENTAL

Ambassador Services offers certified stevedoring and cargo handling equipment for rent, available to dispatch at a moment's notice. Delivery is available.

Available equipment includes a programmable telescopic radial stacker and conveyor system with Razor Tail truck dumping feeder conveyor. Able to process large amounts of material quickly, this machine also allows customers to plug a property's dimensions into its system, giving the stacker a footprint to put maximum amount of cargo on that footprint in which to operate.

Ambassador also offers rentals of grabs, trailers, pallet pans and other stevedoring equipment.

WELDING AND FABRICATION

Ambassador Services offers custom stevedoring solutions. We can build stevedoring and cargo handling equipment for specific applications, such as a lifting apparatus, spreader bars, luggage cages, attachments for front-end loaders, and conveyors. We also do repairs and work such as painting, welding and fabrication.

TRUCKING

Ambassador Services' trucking fleet delivers cargo in Florida and the Southeast with nine tractor-trailer trucks, about 60 different trailers and 12 certified commercial drivers. Our trucking services ensure customers of reliable, on-time deliveries. When it's crucial to get your cargo in a timely manner, Ambassador Services is your answer.

Our trucks carry a variety of cargo, including newsprint, wood pulp, military containers and rental equipment.
