

## Improved COPD outcomes.

Long-acting bronchodilators (LABAs) continue to become the standard of COPD care and are a main component of top-prescribed inhalers on the market today.

LABAs have been proven to improve symptoms and health status, reduce exacerbations and related hospitalizations, and improve exercise tolerance. And with only two treatments a day, this reduces the need for rescue inhalers and allows patients more freedom.

Reliant Pharmacy is proud to reinforce our commitment to helping COPD patients manage their illness by providing two name-brand LABAs in nebulized form:

- Formoterol (Perforomist®)
- Arformoterol (Brovana®)

Talk to your doctor to see if introducing a nebulized LABA into your treatment regimen is right for you.
