Get Earthly

Linux	Mac	Windows (WSL 2)
-------	-----	------------------------

Pre-requisites

- WSL 2
- Docker Desktop with WSL2 backend
- Git

Installation

Under wsl, run the following to install earthly.

```
Terminal
sudo /bin/sh -c 'wget https://github.com/earthly/earthly/releases/latest/download/earthly-linux-amd64 -O /usr/local/bin/earthly && chmod +x /usr/local/bin/earthly && /usr/local/bin/earthly bootstrap --with-autocomplete'
```

sudo is used for:

- placing the earthly binary in /usr/local/bin/ and marking it as executable
- installing auto-completion for your shell

For alternative installation options see the [alternative installation page in the Earthly docs](#). To install Earthly from source, see the [contributing page in GitHub](#).

Verify installation

```
Terminal
earthly github.com/earthly/hello-world+hello
```

This command executes the target hello from the repository github.com/earthly/hello-world.

Syntax highlighting

VS Code	Vim	Emacs	Sublime Text
----------------	-----	-------	--------------

Add [Earthfile Syntax Highlighting](#) to VS Code.

```
ext install earthly.earthfile-syntax-highlighting
```

Installing Earthly in CI

See the [CI integration guide](#).

Next steps
