

Digital Health

Driving the Digital Health Revolution

RTI Health Advance has long recognized the potential digital tools have to transform and enhance how healthcare is delivered. Our diverse team of experts deploy the right scientific methods to quantify product value and communicate that value effectively to your clients and customers.

From mobile health apps and software that supports clinical decision making to artificial intelligence and machine learning, our solutions and team of healthcare experts will help you successfully navigate the complex regulatory and payment pathways to get your digital health products to market.

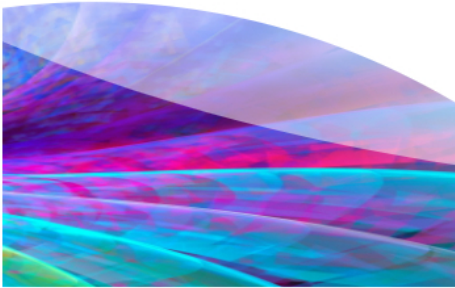

We Help Clients

- Evaluate Virtual Care Services
- Generate Real-World Evidence

- Develop Reimbursement Strategies
- Navigate Market Access Pathways

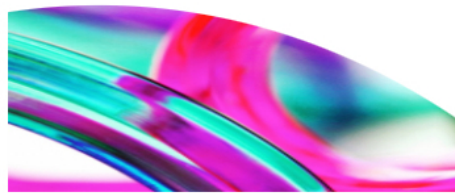

- Increase Digital Health Equity

We've Been Pioneering Digital Health from the Beginning

Pioneered the Use of Wearable Sensors for Clinical and Public Health Interventions

Our foundational research in digital health has significantly bolstered the ability of individuals, clinicians, and researchers to understand device validity and reliability, data acquisition methodology, and processing techniques to intervene in several aspects of personal and population health.

Advanced the Use of Health IT and Standards-Based Health Information Exchange

Since its inception in 2004, we've worked with the Office of the National Coordinator for Health IT to develop health IT policies that ensure secure health information access, exchange, and use by individuals, caregivers, healthcare providers, public health professionals, and other stakeholders.

Advanced Care Coordination for Managing Patients with Multiple Chronic Conditions

We designed, developed, tested, implemented, and evaluated a SMART on FHIR e-care plan to promote the interoperable collection, use, and sharing of health and social data that integrates the full care team across settings.
