Colposcopy Standards (On Demand)

Webinars On-Demand
Sep 30, 2019

Cervical cancer screening programs are effective in the prevention of cervical cancers and have decreased rates in the US where it is available. Central to screening is colposcopy, the use of a binocular microscope with illumination to carefully visualize the cervix and upper vagina. Despite its widespread use, its diagnostic ability is limited by poor sensitivity and inter-observer reproducibility. In 2017, the ASCCP attempted to address these limitations by creating standards for the procedure including: terminology, number of biopsies, and how the procedure is performed and documented. The guidelines were meant to be translatable to a varied audience and adoptable widely. This webinar reviews the 2017 Colposcopy Standards.

Screening Immunocompromised Women for HPV-Related Lower Genital Tract Disease (On Demand)

Webinars On-Demand
Aug 05, 2019

Guidelines for cervical cancer screening have continued to evolve and integrate the latest evidence to support new technologies and algorithms. Most studies reported in the literature have included low-risk populations, leaving clinicians caring for medically complex and immunocompromised women uncertain of recommended screening strategies. During the webinar, Dr. Huchko will discuss patient populations who may require intensified screening, the state of the evidence for screening in immunocompromised women and current expert opinion about recommended screening strategies.

Vulvar Dysplasia: The prototype and the imitators (On Demand)

Webinars On-Demand
Aug 01, 2019

In this ASCCP webinar, we will review the diagnosis and management of vulvar dysplasia. We will discuss best practices, with regard to the work-up of vulvar lesions, and we will examine challenges when making an appropriate diagnosis due to similarly appearing vulvar lesions. Finally, we will discuss the evidence for best practices regarding treatment and risk for recurrence.

Updates on Primary Prevention of Cervical Cancer through Vaccination (On Demand)

Webinars On-Demand
Jun 26, 2019

There is new information on HPV Vaccination including changes in the ages of recommendation and changes in view of other cancer prevention including head and neck cancer. There is population based data from other countries that have ramifications for US providers and patients. Additionally, there are new understandings on the immune mechanisms behind HPV vaccines.

Is HPV as Primary Screening for Cervical Cancer a Changing of the Tide? (On Demand)

Webinars On-Demand
Jun 26, 2019

Cervical cancer screening has had significant impact on the reduction of cervical cancers and mortality from cervical cancer in countries where screening programs have been effectively implemented. However, cervical cancer remains a significant health concern for women worldwide, and existing screening programs can still be improved upon. This webinar will discuss the history of cervical cancer screening and its shortcomings to provide context for emerging recommendations in cervical cancer screening. The use of HPV as a primary screening tool will be discussed, including the recent United States Preventative Services Task Force recommendations for cervical cancer screening.

Update on Vaginitis - 2018 (On Demand)

Webinars On-Demand
May 03, 2018

Although the topic of vaginitis is often trivialized, it causes significant discomfort and symptoms for women who suffer from either acute or chronic vaginitis. In this presentation, Dr. Nyirjesy will summarize the overall evaluation of women with vaginal complaints and discuss the benefits and limitations of various testing modalities. This section will be followed by a discussion of the most common causes of infectious vaginitis (bacterial vaginosis, trichomoniasis, and vulvovaginal candidiasis) and of desquamative inflammatory vaginitis, with management tips for managing both acute and chronic cases.

Lichen Sclerosus and Lichen Simplex Chronicus (On Demand)

Webinars On-Demand
Mar 13, 2018

This presentation will focus on lichen sclerosus & lichen simplex chronicus—two of the most important, common and sometimes challenging vulvar dermatologic conditions: We will present images and comparisons as we discuss their clinical presentation, diagnosis, microscopic findings, pathophysiology, and treatment.

Updates on Technology and Testing in Pathology (On-Demand)

Webinars On-Demand
Dec 27, 2017

Pathology consultation is geared toward providing useful information to assist in the provision of optimal care. This webinar will cover laboratory aspects of the evaluation of lower genital tract disease. Topics to be covered include: types of HPV testing available, handling of biopsy and excision specimens to obtain the best report possible, molecular testing and immunohistochemistry, and areas of diagnostic difficulty.

Comprehensive Colposcopy Courses

Registration Open - In-Person

These are live, face-to-face, courses where students meet for (4) days with their colleagues and faculty. There is a non-CME hands-on portion to this course.

Comprehensive Colposcopy - Philadelphia 2022

Philadelphia, PA
July 27, 2022 - July 30, 2022

Comprehensive Colposcopy - San Diego 2022

San Diego, CA
October 26, 2022 - October 29, 2022

Registration Open - Online

These are online and on-demand courses where students have (3) months to work through the course material at their own pace. These courses contain **all of the same didactic content** as the in-person course.

Comprehensive Colposcopy - April 2022

Online and On-Demand
April 01, 2022 - June 30, 2022

Comprehensive Colposcopy - July 2022

Online and On-Demand
July 01, 2022 - September 30, 2022

Login to an Online Course

Registered attendees only

Comprehensive Colposcopy Online

Login for April - June 2022

Save the Date - Future Courses

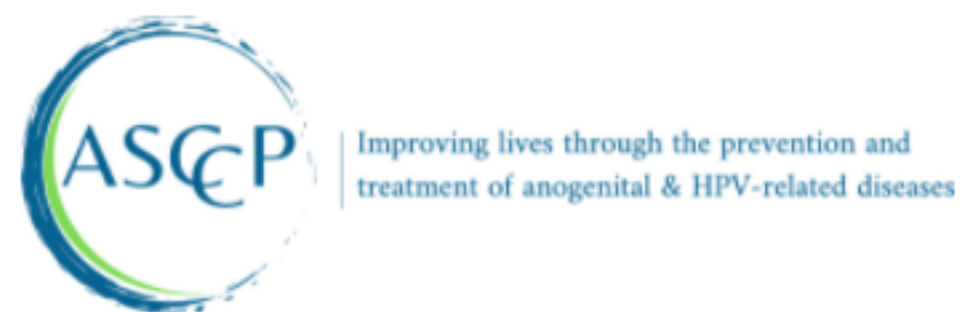

Comprehensive Colposcopy - Philadelphia 2022
July 27-30, 2022
Philadelphia, Pennsylvania

Comprehensive Colposcopy - San Diego 2022
October 26-29, 2022
San Diego, California

Comprehensive Colposcopy - Tampa 2023
March 1-4, 2023
Tampa, Florida

Comprehensive Colposcopy - San Diego 2023
July 12-15, 2023
San Diego, California

Comprehensive Colposcopy - Atlanta 2023
October 25-28, 2023
Atlanta, Georgia
