🎉 Proud to announce our $20M Series A from a16z!

# Meet Graphite:
# Fast, simple code review
Graphite is an open-source CLI and a code review dashboard built for engineers who want to write and review smaller pull requests, stay unblocked, and ship faster.

## A powerful command line interface designed for stacking

Graphite's CLI makes creating and submitting stacked changes easy.

- **Intuitive commands**: get comfortable with the workflow quickly
- **First-class support for stacks**: automatically rebase, submit, and sync your stacked changes
- **Git under the hood**: easily follow along with every CLI operation
- **Fast, easy installation**: one-line install with npm lets you get started in minutes

## Seamlessly & securely integrated with GitHub

Graphite syncs all of your PRs, comments, and reviews with GitHub, so you can use Graphite even if your coworkers haven't signed up yet and without affecting their workflows. Teammates can review, comment, and approve just as they always have - Graphite will even add a comment to help them easily navigate your stacked PRs.

We understand the importance of keeping your source code safe - that's why we built Graphite with security & privacy best practices from day one. Learn more about how Graphite securely integrates with GitHub.

# What engineers are saying about Graphite

I've never had a dev tool so **immediately and vastly improve my workflow**.

**Kurtis Bass**
Backend Engineer at GreenPark Sports

**Graphite has leveled up all developers on our team, from new grads to experienced engineers**. The CLI makes advanced Git concepts accessible and fast, and we're only beginning to scratch the surface of how stacked diffs improve our workflows.

**Rahul Mehta**
Co-Founder & CTO at SimplyWise

**Graphite is awesome. It's not just cosmetic - it's changing the way our team thinks about writing code**: PRs have started to become "atomic." The magical moment for me happened when I reviewed a PR from a junior engineer in which they put up just an API interface with none of the logic implemented - these discussions are really improving our code quality, reducing bugs, and making the team work better together.

**Willy Xiao**
Eng lead at OfficeTogether

**Graphite makes the process of managing stacked changes so much easier**. Instead of spending energy managing rebases and keeping the current state of the stack in my head, I can focus on writing good-quality code and breaking it up into concise PRs.

**Mary Fesenko**
Senior Software Engineer at Chronosphere

Stacked changes allow thousands of Facebook engineers to collaborate on a single repository. **Thanks to Graphite, this workflow is now accessible to anyone** - no more rebasing. I'm way more productive, and the team's support has been incredible.

**Jonas Gebhardt**
Founding Engineer at Vori
