TruCast™

TruCast™ Group Polling

TruCast™ is a group polling software developed by Lone Star® to facilitate local and distributed subject matter expert group voting. When used on a localized basis, it uses wireless tablets and a local wireless server to both ask questions and record results.

How it Works:

The voting software is based on Lone Star's proven data elicitation and decision analysis processes and increases efficiency and accuracy of group and subject matter expert data collection. The system is self-contained, intuitive, easy to learn, and integrates with Lone Star's suite of modeling and simulation tools. A facilitator leads the group voting and data collection, and TruCast™ provides instant, error free results.

Looking for Price to Win software? Understand what is needed when bidding government contracts with Lone Star's TruPredict! Powered by TruNavigator®
