Unifilter

World's First Unibody Portafilter

\$365 USD

HANDLE MATERIAL | FKM RUBBER

FKM Rubber

Solid Teak

Preorder

\$365

Overview

We recreated the portafilter out of a single piece of stainless steel for an optimal extraction geometry. No more removable basket, unprecedented extraction geometry, improved thermal stability; a giant leap for espresso.. Use it, rinse it, wipe it, with no other routine maintenance. Shipping August, September, and October 2022.

Works perfectly with the Unifilter

For about a hundred years, the basic construction of the portafilter has remained the same. We decided to change that.

Cleanliness

With a removable basket, espresso residue inevitably builds up in the crevices. Without frequent

removal and
cleaning or
acid baths,
this can
become rancid.
The Unifilter
is a single
piece with no
hidden areas,
so a simple
water rinse
after each use
keeps it
perpetually
clean.

Cleanliness

With a removable basket, espresso residue inevitably builds up in the crevices. Without frequent removal and cleaning or acid baths, this can become rancid. The Unifilter is a single piece with no hidden areas, so a simple water rinse after each use keeps it perpetually clean.

Basket Holes

Basket Holes

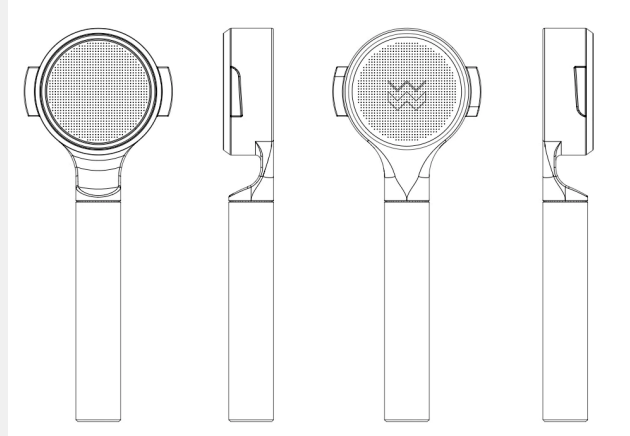

Basket Holes

Due to how they are manufactured, baskets have angled side walls. The diameter of usable hole diameter is smaller than the diameter of the basket. The Unifilter has straight internal walls, and the holes go all the way to the side walls for even extraction throughout the puck.

Technical Specifications & Details

01 Technical Details

- **Size: 220mm x 85mm x 30mm (8.6" length, 3.3" width, 1.2" high)**
- **Weight: 18oz (520g)**
- **Material (body): Stainless 304**
- **Material (handle): Black FKM rubber or Teak wood**
