# 360° customer and session visibility

⊘ Filter and search users by any customer or device attributes.

⊘ Network link analysis maps users sharing devices, or IP addresses.

⊘ Quickly review case summary with customer details, executed and triggered rules, social profile, and geo location.

# Easy to use case management

⊘ Granular ability to block current and future users by specific attribute such as phone number, email address, or device IP.

⊘ Supports case batch review and assignment. Queue up users and transactions for post-hoc analysis.

⊘ Easily approve or block users, and return funds for all pending transactions to originating bank account.

# Powerful no-code rule builder

# Powerful no-code rule builder

- Create custom rules based on any customer, device or transaction attribute

- Rules execute in 100's of milliseconds, so you can take actions on rules in near real-time.

- Back-test rules in "shadow mode" before deploying to production, to eliminate false positives.

**Move money fast, without risk.**
