

Disaster Recovery

Looking for scalable, compliant cloud data backup and recovery?

Disasters, both natural and human-driven, increase the risk to your institution's valuable data. Our cloud data backup and recovery service allows you to mitigate these risks while adhering to data recovery compliance.

Disaster Recovery in the Cloud

The goal of a disaster recovery plan (DRP) is simple: ensure your institution has a structured plan to recover business operations in the event of a disaster or cyberattack. As a fundamental part of your institution's business continuity plan, maintaining a DRP is a solid business practice that also is mandated by regulators. Our disaster recovery service offers a cloud-based approach to data recovery, meaning your institution can access stored data to seamlessly back up your IT environment in the event of a disaster.

Features

Cloud Based Data Backup and Recovery

Disaster Recovery as a Service

Adheres to Strict Financial Industry Compliance Standards

vCIO Consultation

The Advantage of Cloud Data Recovery

Cloud data disaster recovery has become a best-practice for data-driven financial institutions. Our disaster recovery solution allows you to maintain backups outside of a single location or region, ensuring that your data is safe from a localized disaster. Hosting data backups in the cloud also provides a rapid and seamless cloud hosting environment, allowing your servers to scale up to full force quicker than on-premise data backup options. And because we service the financial industry, our managed cloud backup and recovery solution maintains strict compliance standards.

Our Disaster Recovery as a Service

As a disaster recovery as a service (DRAAS) provider, we tailor our approach to ensure that your cloud backup is both scalable and compliant. Our DRAAS provides:

- Customizable recovery points

- Annual cloud recovery testing
- vCIO consultation for disaster recovery and business continuity planning

I've been with the bank 40 years, and although the last 12 months have been challenging, they have also been rewarding and educational because of our involvement with the vCIO program. It is such a great team, and I don't know how the bank would get by without them.
