Modernize Your IT Infrastructure with CSI Cloud Services

Maintaining a secure, reliable and compliant IT infrastructure is critical in today's rapidly evolving world of technology. CSI Cloud Services allow you to host servers and desktops in a highly available and secure cloud infrastructure, strengthening regulatory compliance and delivering a uniform desktop experience for both local and remote users.

Features

Cloud Infrastructure through Microsoft® Azure

Integrated Security Monitoring

Hosted Server and Virtual Desktop Infrastructure (VDI)

Identity and Access Management

Why Choose a Managed Cloud Hosting Service?

Building and managing a highly stable, reliable and redundant infrastructure is too expensive for most organizations. With the option to scale as the needs of your institution grow, cloud hosting allows for flexibility and empowers you to accommodate rapidly changing business strategies.

A cloud-based infrastructure enhances compliance with security and regulatory requirements, providing you peace of mind with daily operations as well as during audits and exams. To mitigate cybersecurity risks, environment access is secured by leveraging multi-factor authentication and artificial intelligence to identify and respond to higher risk situations.

Confidence in CSI Cloud Services

By partnering with CSI for cloud hosting services, your institution has access to **security monitoring** and **strategic support**. As a fully managed cloud services provider, we take care of implementing, managing and monitoring your cloud-based IT infrastructure, allowing you to:

- Mitigate cybersecurity risks with the latest security defenses
- Strengthen compliance with regulatory requirements
- Improve user experience with access to virtual desktops

Enabling Virtual Desktop Infrastructure with Cloud Hosting

Our cloud hosting services support VDI, allowing your institution to deliver a modern, uniform desktop experience. VDI creates a technology environment that provides secure virtual desktop access from anywhere, on any device—for both local and remote users—to empower your institution's future growth.

For what we're paying CSI—we couldn't hire someone for that price. This partnership has literally saved us hundreds of thousands of dollars through the years, and even if we hired more staff, we wouldn't be able to have the 24x7 monitoring unless we paid someone to work overnight.
