SPAN Panel Installation Guide

Updated 6 months ago

Pre-Installation

How to prepare for your SPAN installation!

Site Survey

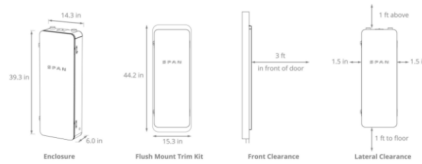

Before you schedule your installation, a Site Survey with your installer will need to be completed. The purpose of this visit is to allow the electrician the opportunity to confirm technical details and adequately prepare for installation. During the inspection, the electrician may need to exercise your existing panel breakers, but there will be no significant disruption to power.

Prepare Your Home

To ensure quick and efficient installation, clear the ground, wall space, and any key access points for installers to work. Minimum clearances required for installation of SPAN are shown below:

Installation Day

What to expect on installation day!

Like any electrical panel upgrade, power will be turned off for approximately 3-8 hours and your
