

IDENTITY PROOFING AN UNRIVALED SUITE OF PRODUCTS.

Only AuthenticID can help you stop fraud, increase customer conversion, reduce operating costs and elevate security with thousands of proprietary machine learning and computer visualization models.

Everything you need to manage identity-based transactions with confidence.

AuthenticID's Identity Proofing and fraud detection solutions use proprietary, 100% automated machine learning and computer vision technologies to ensure that people are who they claim to be. Our portfolio of products offers a complete fraud prevention solution to meet any business's KYC and IAM requirements.

Identity Proofing.
The complete fraud solution bundle.

Identity Proofing is a comprehensive offering that combines our verification and fraud detection products into a complete KYC and IAM package. Non-invasive businesses can instantly verify the identities of their customers and employees with the highest accuracy to prevent fraud. Identity Proofing streamlines the user experience to increase conversion, and provides enhanced underwriting and reduced operational costs while increasing scalability.

- ID Verification
- Biometric Authentication
- Fraud Shield
- Consent Ledger

ID Verification.

With our 100% automated proprietary Identity Proofing solution, you can catch even the most sophisticated fraudulent documents and professional fraudsters. In addition to detecting fraudsters, our image capture technology gives you the ability to capture and process low-quality images with the most challenging backgrounds and lighting. What's more, our proprietary OCR, ID barcode and MRZ data extraction technology has the highest accuracy in the industry and supports over 20 international languages.

Biometric Authentication.

Confirm a person's true identity with just a selfie. Speed with our proprietary image processing, our ID Photo-to-GIF verification has the lowest processing time in the industry.

With this simple, user-friendly way to authenticate an individual, you can match a person to the photo on a government-issued ID, profile pictures, or any other image of a person's face with complete accuracy. Our infrared detection and face match detection ensure the person is actually present instead of a deep fake or spoof.

What makes our Biometric Authentication superior?
Our Biometric Authentication is powered by an unrivaled combination of Liveness Detection and Face Match technology. Here's how it works.

Liveness Detection.
Liveness, spoof detection technology ensures the person taking a selfie is doing so in real time. Biometric detection is achieved using a robust combination of active and passive facial algorithms.

Face Match.
With Face Match you can ensure that the person in possession of a government-issued ID is the same person that matches the ID. Face Match's facial recognition technology can be matched to other selfie images, profile pictures, or other previously captured database images.

Fraud Shield.

Pave up a nearly impenetrable barrier against fraud. Fraud Shield, our proprietary biometric and biographic watchlist service can almost instantly protect your company in real-time against the most (insanely) rapid, prolific, inventive bad actors.

This "superpower" technology goes far beyond identity proofing to stop even more fraud vectors using our fused biographic and biometric watchlists to stop fraudsters and bad actors.

- With AuthenticID Fraud Shield you can:
- Flag and add fraudsters to a Bad Actors Watchlist
 - Stop multi activity and list party fraud
 - Tweak frequency of account creation attempts with our Velocity feature

Consent Ledger.

Tired of trying to keep up with constantly shifting consent management regulations? Our Consent Ledger gives you an immutable log of user consent for each transaction, including the specific jurisdiction of each ID document and geographic capture location. As a result, you can more easily ensure compliance with relevant global data privacy regulations while mitigating expensive non-compliance risks. In addition, you can more easily address local laws like CCPA, GDPR, COPI, etc. by empowering users to revoke consent at any time.

Identity Decisioning Engine.

Our Identity Decisioning Engine simplifies data management for your teams and also functions as an orchestration layer for fused decision-making. It can be used in combination with third-party partner services when warranted by specific use cases.
