# VOICE ACTIVATED STRUCTURED REPORTING

## Structured Reporting + Speech Recognition

*A faster, simplified, highly intuitive voice-driven system*

## CLICKVIEW 9i Easy, Fast, and Accurate

*A more effective automated radiology reporting system*

## Easily Scalable Web Architecture Platform

*Simple, low-cost solution for practices and hospitals*
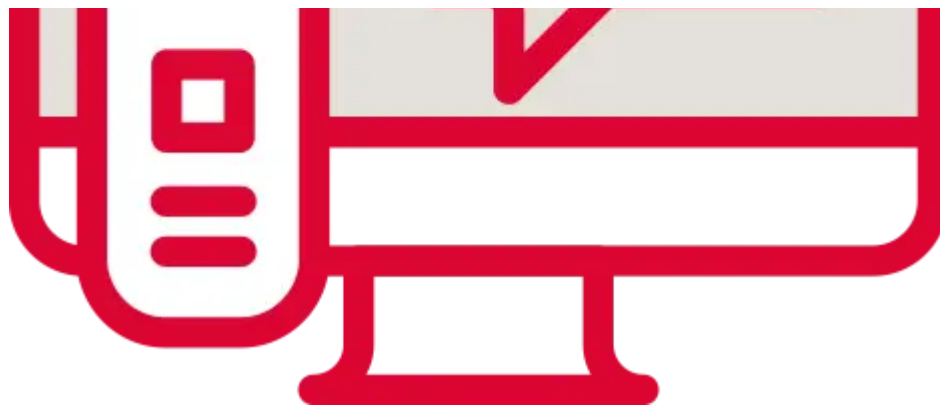

# Radiology Structured Reporting Software

## Radiology Structured Reporting Software That's Fast, Accurate, and Easy to Use

CLICKVIEW pioneered Structured Reporting in Radiology and Diagnostic Ultrasound more than 35 years ago. It's an expert among radiology software companies. CLICKVIEW's years of domain experience and advanced technology expertise have translated into significant innovations. They developed the first true web based radiology structured reporting (https://wiki.ihe.net/index.php/Structured_Reporting_Content_and_Transport) software products which include multi-media rich user interfaces. Their newest product, CLICKVIEW 9i, is an innovative, all voice activated user interface. The 9i products integrate voice activation and speech recognition for hands-free reporting. Now you can combine speed, ease of use, and natural workflow of speech recognition with the best features of CLICKVIEW's multimedia structured reporting templates.

The result? The best of both worlds! A true Game Changer in Radiology Structured Reporting Software. CLICKVIEW's 9i voice activated user interface seamlessly navigates structured reporting templates for ease of text entry, macro activation, and rapidly reduces complex report generation to minutes or less.

## Hands-Free

Liberate your hands from the computer keyboard and mouse. Create new reports faster and with less work using only voice commands.

## Text Entry

Voice Activated text entry is dynamic, flexible, and not tied to rigid template text boxes. Speech sensitive algorithms automatically populate macro data and text fields.

## Macro Activation

Voice Activated macros are the Radiologist's best friend for fast insertion of frequently used phrases and terms while maintaining a natural, fast, normal workflow.

## Navigation

New user interface is a complete voice activated display screen that follows the logical sequence and organization of natural voice report preparation, prior review, and multi-media elements.

# 9i Voice Activation is a Game-Changer That Improves Radiology Workflow

You demand the best from your team, and radiology imaging software is no different.

CLICKVIEW 9i integrates the best features of conventional structured reporting and speech recognition technologies. Our new product is a faster, simplified, highly intuitive voice-driven multimedia system. The result? More effective automated radiology structured reporting software that you can trust.
