BXpanded Piranha Tooth Bar

The Piranha is custom built to fit your loader bucket based on actual inside bucket width. Please select your actual inside bucket width above or email us at contact@bxpanded.com for more information. For measuring instructions click [here](#).

The Piranha is a multi-function attachment that one user called "An unbelievable tool that turns your ... into a 'Big Boy' excavator. The Piranha Tooth Bar slices and gouges its way through the toughest terrain converting the front loader into a weapon of mass destruction. Installs in less time than it takes to BBQ a steak -- you won't believe how easily your Piranha can chew your backyard mountain into a molehill!!!"

Another says: "The BXpanded Piranha toothbar is awesome! I tried digging into some large dirt piles that have been sitting for a number of years and with no tooth bar on the bucket it did not work. I am so glad I bought the Piranha over any others. It digs extremely well. I moved a lot of dirt last Fall and the tooth bar was required to get the dirt loose. You

can also back drag with your bucket and get a flat surface much better than the other tooth bar styles."

The Piranha is the result of extensive testing and is intended for use in digging as a traditional tooth bar with the added capabilities of brush and weed clearing and landscaping and ground prep work. The multi-depth tooth pattern and its bevels and angles provide real "grabbing power" that simply eats up small trees and saplings. It's flat backed to

allow easy back dragging for smoothing or, when tilted downward, can take out roots and grass clumps to leave a prepared seed bed.

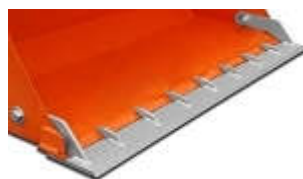

The Piranha is serious steel! It's finished with tough hammered finish over. It comes with complete easy to follow installation instructions and necessary hardware.

Rev up your earth! Piranha
