Available

Customizable React Component Library

Quickly & seamlessly integrate notifications & chat into your application, then customize with your own branding.

[@dialectlabs/react](#)

```
import { NotificationsButton } from '@dialectlabs/react-ui'

...

<NotificationsButton
  wallet={wallet}
  network={'mainnet-beta'}
  publicKey={YOUR_PROJECT_PUBLIC_KEY}
  styles={styles}
/>
```

Available

Flexible Monitoring Toolkit

Our monitoring framework makes it easy to extract and transform on-chain data into targeted, timely smart messages.

[@dialectlabs/monitor](#)

```
Monitors.builder(...)
  .poll((subscribers: ResourceId[]) => {
    // Get collateral health data for all subscribers
    collateralData = subscribers.map(
      subscriberPublicKey =>
        getCollateralData(subscriberPublicKey));
    return collateralData;
  })
  .transform({
    pipelines: [
      // Falling edge example: only send a message when
      // the value drops below 0.5
      { type: 'falling-edge', threshold: 0.5 },
      { messageBuilder: (value) => `Your collateral
health (${value}) has dropped below 0.5.` },
    ]
  });
```

Available

```
const members = [
  // scopes = [admin, write] privileges
  { publicKey: wallet.publicKey, scopes: [true, true] },
  { publicKey: recipientPublicKey, scopes: [false, true] },
```

Dialect Protocol

At the foundation of it all is our open source protocol, enabling composable, censorship resistant on-chain messaging.

[@dialectlabs/protocol](#)

```
};  
// Create a new dialect  
const dialect =  
  await createDialect(program, wallet, members);  
// Send a message  
await sendMessage(program, dialect, wallet, 'GM W@RLD');  
  
...  
  
// Get messages  
const dialect = await getDialectforMembers(program,  
members);  
dialect.messages.map(map =>  
console.log(message.owner.toBase58(), message.text));
```

Completely Open Source

We're building for the community. Dive in, fork, contribute, or run the codebase yourself.
