

EAGLE

PROFESSIONALS

GET STARTED

Factories in Malaysia and Florida help us navigate global trade concerns. With local operations in San Francisco and Jacksonville, we have delivered more than 15 GW to the U.S.

market. We now introduce EAGLE Storage, our turnkey residential, C&I, and utility energy storage solutions. Why contract with multiple companies when you can contract your solar and storage needs with the same company? We stay connected to our customers at every step from the moment we meet until the end of project life, so we hope you'll join the growing JinkoSolar family to deliver reliable and affordable renewable power.

MODULE TECHNOLOGY

EAGLE Modules have shown up in more debt-financed projects than any other module since 2016 because we deploy leading-edge technology at scale and at the lowest cost. This low-cost position has been built through careful sourcing, vertical integration, state-of-the-art manufacturing efficiency and high quality. The production of higher-quality goods reduces quality costs. That's why we have kept an exceptional bill of materials. As our strategic partner DuPont™ Photovoltaics says, Materials Matter™.

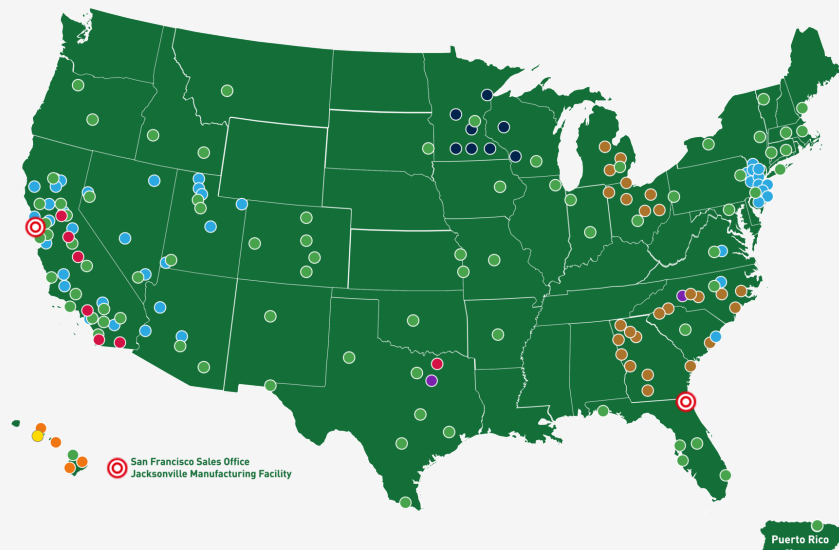

ENERGY STORAGE TECHNOLOGY

As an energy storage integrator, we are putting together the best technology at the best value. This allow us to follow industry trends and pivot to the most ideal technologies for different applications. EAGLE Storage today uses LFP batteries, which have less thermal runaway risk. We also use carefully selected PCS and US-based EMS to comply with the various cybersecurity risks identified in the U.S.
