

## HYDRO-EXCAVATION

Pro-Vac's Hydro-Excavation Team uses pressurized water and industrial vacuums to break up and remove soil/sediments. Hydro-Excavation ultimately lowers the risk of underground utility damage. **Hydro-Excavation is a safe, environmentally friendly method of digging around underground utilities. Hydro-excavation is traditionally used for exposing utilities, potholing, trenching, and more.**

## HYDRO-EXCAVATION EXPERTS

Pro-Vac can surgically pinpoint exactly where your utility damage issues are by safely exposing utilities and without damaging roots of trees.

- Pro-Vac trucks vacuum up soil during excavation and move it off-site so your site remains clean
- Large-scale liquid and sludge cleanup for sewer and septic system maintenance
- No messy stockpile of dirt left from traditional excavators
- WA soil is regulated. Pro-Vac will deliver spec dirt for backfill, such as sand, pea gravel, 5/8s crushed rock and more
- Pro-Vac disposes sediment properly within federal regulations, so you are protected from fines.
