Revolutionizing the way messy industrial spills are cleaned.

For decades there has been little innovation in industrial spill cleanup. The most common product used today is clay absorbent. Using clay absorbent is slow, messy and worst of all can be hazardous to employee's health and the environment.

Organic all-natural industrial spill solution.

FlashDry quickly absorbs spills, leaves no mess behind and gets you back to work immediately. It is made of coconut coir and research has found that it is one of nature's natural wonders for its ability to quickly absorb any liquid.

Connect with us.

All of our products are driven by extensive research into real-world needs. Each of our chemical alternatives has been made possible by cutting-edge science and technology. Each is designed to be environmentally friendly without reducing performance. All represent the new benchmark in solving industries' dirtiest, most challenging problems.
