How it Works

Simulate on sandbox

Onboard dummy cardholders and test out transactions in our instant issue sandbox. Use the lightweight APIs to run a battery of tests in the simulated environment

before going live with transaction processing.

Instant launch

Certify and move to production. A fully tested, proven path to product launch and payment processing ensures launch in the shortest possible time. Flexible, scalable solutions permit iterations and downstream enhancements.

Create card program

Create business specific card programs, and choose various automated processes for funding, authorisations, limits. Personalise/customise cards for branding requirements before issuance.

Onboard Users

Issue branded ready-to-use physical, virtual cards with configurable controls and multi-purse settings to customers for all transaction requirements, with authorisations supported on us or off us.

Use Cases

Capabilities of financial payments are expanding through digitisation, and the difference is clearly the ability to offer greater control over transactions and the flexibility to accommodate extended requirements.

From funding options, limits, fees, friction free processes, to high speed, secure transactions, the wishlist is a combination of exciting opportunities for card holders and service providers.

The shift from transactional economy to relationship based economy makes it necessary for convenient options, and this is where our innovation is at play.

Smart contracts on virtual cards for buy now pay later options, exactly at the time of purchase, offering customers a level of convenience that turns the whole experience on its head.

Complex business requirements need refreshing solutions that simplify routines, without the need for additional actions. Here is how we help fleets.

Multi-purse setup for debit cards of fleet card accounts help fleet managers manage transactions for various categories of expenses with transaction and count limits. Smart controls help rein in expenses without the need for manual monitoring of each transaction.

A card for special reasons. Physical cards are best used for specific spends, while virtual cards are best used in card not present transactions. Business entities reimbursing card holder employees need solutions that help reimburse categories of expenses.

Multi-purse setup for debit card to authorize high value expenses on virtual cards, with the physical card configured for use in routine spend requirements, including merchant processing services.

About Us

Our expertise in white labelled solutions, global banking platforms and next-generation payment processing

technologies has powered multiple transformation success stories. Combined experience in excess of hundred years in relevant domains, and deep expertise in production environments has honed our capabilities. We have put our expertise and innovation to work, democratising card issuance, empowering clients regardless of size and domain, to design, implement and launch an exciting range of card programs catering to domain driven needs. We remain a focal point for innovative, user-centered programs that continue to be runaway successes for clients.

Behind every successful innovation is the implementation and the maturity of the organisation. Founded and helmed by dynamic, focused go-getters, our teams are fine examples of brilliant minds at work. Steered by domain experts from card payments, reputed advisors, strategists, and experts in product management, we owe our success to the assets that have driven innovation. Our solution architects and brilliant engineers continue to make a huge difference to the quality of our services.
