

# CloudLighthouse

Visualize deep insights on your complex multi-cloud environment

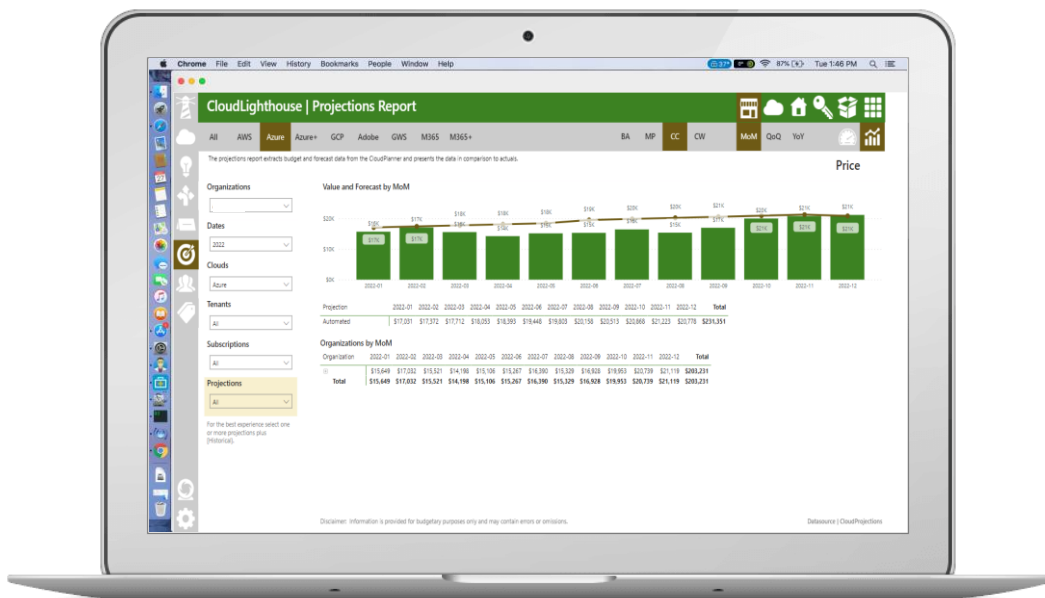

## A cloud cost optimization tool that IT and finance leaders will love

Most businesses rely on software- and infrastructure-as-a-service (SaaS and IaaS) solutions. According to Gartner, factors such as the global health crisis and fluctuating economy drove companies worldwide to quickly deploy new multi-cloud and hybrid cloud IT environments. To control costs and maintain data security across their sprawling cloud environments, decision makers in both the IT and finance departments need a single source of truth to analyze all aspects of cloud usage.

CloudLighthouse is a proprietary unified infrastructure reporting tool exclusively available from GreenPages. Designed to support our customers with multi-cloud and hybrid cloud environments, CloudLighthouse monitors Amazon, Microsoft, Google, and hundreds of other IaaS and SaaS providers to deliver real-time usage reporting visualizations. CloudLighthouse requires no special software or hardware to deploy and can be securely accessed from any web browser.

### Benefits

- Visualize your cloud consumption across all major providers from a single pane of glass
- Take quick action to reduce monthly spend with real-time cloud cost optimization guidance
- Leverage per-user reports and tags to assign chargeback across your tenant, office, or department faster than ever before

# CloudLighthouse

## Product capabilities

<b>Actuals Report</b>	The Actuals Report provides historical cloud usage information from multiple cloud environments and data sources.
<b>Projections Report</b>	The Projections Report extracts budget and forecast data from the Cloud Planner and presents the data in comparison to actuals.
<b>Recommendations Report</b>	The Recommendations Report is a report providing cost savings opportunity savings prepared for your organizations review and acceptance.
<b>Allocations Report - User</b>	The User License Allocation Report is an estimate of the daily license usage and assignment to each user within your organization. Valuable for performing cost chargeback activities.
<b>Allocations Report - Tags</b>	The Tags Allocation Report provides detailed allocated cost chargeback reporting based on your organization' tagging efforts.
<b>Options Report</b>	Calculate the cost-to-performance ratio for your Azure virtual machines based on a commitment pricing comparison.
<b>Reservations Report</b>	Get the most out of cloud subscription by viewing data associated with your committed reservations and a projection of the amortized expenses.
<b>Settings Report</b>	Provides notifications associated with your cloud applications. The notifications include look-back & look-forward information regarding pricing, offers, breaches and outages. Configure alerts from GP experts on the above topics.
