## HIGHLIGHTS

Integrates  
Onto Cleat

Customizable  
Level of Support

Reduces Risk  
of Injuries

## DESCRIPTION

The XFAST brings new protection to the cleat world. Similar to the IFAST, the XFAST mimics

anatomy, giving athletes access to their full range of motion while also giving them a precise and customizable level of protection. By integrating into the cleat, the XFAST converts the entire cleat into a stabilizing device for the athlete's ankle joint.

## PART 1: TENSION SYSTEM | LIGAMENTS

### Customizable Support

Incorporated into the XFAST is a synthetic ligament. Using specially selected materials, the tension systems behave like

the ligaments in the body. Built into the tension system is an adjustable tension cord that allows for a customizable level of support.

## PART 2: THE CUFFS | BONE

### Built for Protection

The XFAST uses an upper and lower cuff to secure the device to the ankle. By using a material slightly more sturdy than the tension system, these cuffs act like the bone and keep all motion and protection focused at the ankle joint.

## PART 3: COMPRESSION SLEEVE | SKIN

### Comfort Fitting

Keeping the body protected and compressed is the skin. The XFAST compression sleeve acts as the skin, surrounding the ankle joint, keeping it warm and mobile.

My son sprained his ankle awhile ago and it would bother him at soccer practice and games. Since using the XFAST over his cleats he gets the extra support and now the ankle feels better. thanks ARYSE
