

*A next generation network: Securely move data, connect user groups, and access shared services.*

## Hide Data in Commercial Noise

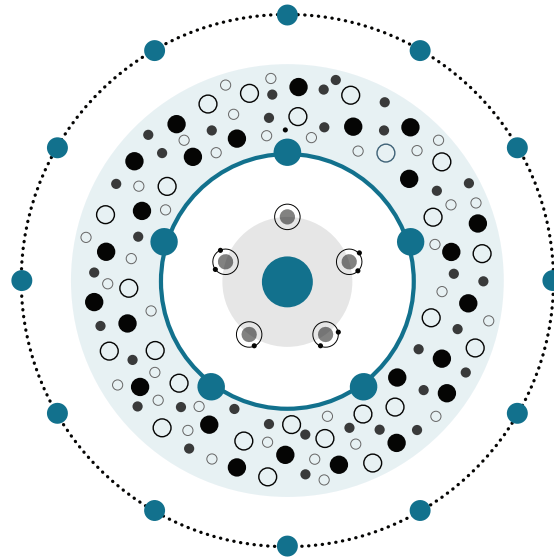

### Move Across Borders

Move data from endpoints anywhere in the world to a secure backend

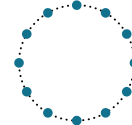

### Flexible Backend Integration

Unlimited flexibility in backend integration including commercial, government, cloud-based, or Ridgeline data centers

### Massive Commercial Flows

The isolation layer intermixes & moves data through large commercial networks

### Bespoke Edge Nodes

Ridgeline offers a wide range of edge nodes to fit any use-case, mission, or locale

### User-Selectable Routing

Manage data pathways through our intuitive interface; change points-of-presence on demand

### Extend Your Existing Networks

Ridgeline can integrate Universe into existing networks so you don't have to start from scratch

### Compatible With Any Ridgeline Product

Add to enhance data security, hide associations, or move data across borders

### Data Observability & Monitoring

24/7/365 Monitoring, maintenance, & support; Provides critical insights into your data
