# Home for tech writers and readers

The hassle-free blogging platform for engineers, thought-leaders, and the dev community!

Blog on a custom domain, own your content and share your ideas with the world.

Get started - it's free!

"You can start a dev blog in just a few seconds using Hashnode and then you can move that to your own domain if you get one later. They will even help distribute your articles on their platform. By far the best place to create a blog, imho."

Quincy Larson, Founder freeCodeCamp

No Ads. No Paywall. No Kidding.

Blog on your personal domain

Map your custom domain in just seconds. Serve your blog over HTTPS with no extra configuration. Get a high performance, secure, and fully-optimized dev blog that delights your readers.

Instantly find your audience

Every time you write an article, Hashnode publishes it on your domain and shares it with the dev community members on the homepage. The readers are directed to your website to read and interact with your content.

No annoying ads/pop-ups

Knowledge sharing on Hashnode is and will always be completely free. Because we value the relationship between you and your readers, we won't show ads or pop-ups on your articles.

KEY FEATURES

Everything you need to start blogging as a developer!

Automatic GitHub Backup

Every time you publish an article on your tech blog, a markdown version of the post is pushed to your private GitHub repo as a backup.

Write in Markdown

Write your content in a distraction-free Markdown editor with proper syntax highlighting and see live previews instantly. Embed images, code snippets, tweets, and much more.

Map a custom domain

Bring your custom domain, and get up and running within minutes. We issue, and renew SSL cert for you automatically.

Superfast Next.js Powered Tech Blogs

Hashnode blogs are powered by Next.js, and are served via Vercel's world class CDN.

TESTIMONIALS

Don't just take our word for it, trust the community!

"I wanted to use my own domain with Hashnode and was prepared for all the hassle...and then - literally just one click and it was done! So easy, so convenient. Go Hashnode!"

Simon Holdorf
Full-Stack Engineer at SAP, Cloud Advocate - AWS Certified

"I've decided to make a huge leap and migrate my developer blog to Hashnode ! I'm really impressed with what they've accomplished in this short amount of time! I'm happy to join this community and I can't wait to share more of my learnings on AWS with you!"

Danny Steenman
AWS Cloud Consultant & AWS APN Ambassador at CloudNation

"After using Gastby, Ghost, Jekyll and Wordpress I'm going to use Hashnode, I wished to have known this amazing project months ago."

Rafael Corrêa Gomes
Tecnology Director at Le Site

"I am killing the blog off my personal site and going full on Hashnode. Reasons: - Personal Domain - Free Analytics - Free Newsletter - SEO built in - Constantly pushing new features - Community is amazing!"

Corey O'Donnell
Software Engineer at Better.com

"Hashnode is super developer-friendly. I like it much better than Medium. Being able to write blogs solely using markdown and auto backup with GitHub is awesome! Goodbye, Medium."

"100 days ago, I published my first blog post on a new and unfamiliar platform called Hashnode. Today, publishing articles on Hashnode is a routine, a hobby, a great joy."
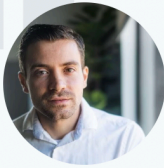

Qiusheng Wu
Assistant Professor at the University of Tennessee

Victoria Lo
Solutions Engineer at PayPal

See all testimonials 💖

"It's amazing to see how fast devs go from 0 to Blog under a domain they own on Hashnode 🤯. It reminds me a lot of what Substack did for journalists."

Guillermo Rauch, CEO Vercel

FOCUS ON WRITING, WHILE WE DO THE REST

Features that make tech blogging
10× better

Superfast Next.js Powered Blogs

Hashnode blogs are powered by Next.js, and are served via Vercel's word class CDN.

Own your data

You retain all the rights to your content. Export and download all your posts from your dashboard with a single click.

Customize Design using CSS

Modify the appearance of your developer blog using our Custom CSS feature. Change the font family, font size, primary link colors, and more.

Free built-in newsletter service

Enable a newsletter service with the click of a button, and let your readers easily subscribe to your developer blog.

Built-in Analytics

Powerful analytics to track the number of views, likes, and comments, and analyze the performance of your articles over a period of time.

Article Series

Series is a great way to organize your content. It helps you easily group a series of articles related to a single topic.

Drafts

Share your drafts with your friends to get some early feedback before you hit the publish button.

HTTPS by default

It doesn't matter if you are using our free subdomain or a custom one. We provide SSL certificates for free for all the blogs.

Native GitHub Integration

Publish and backup articles directly on a private or public GitHub repo - enabling you to always have control over your content.

Unlimited Staff Users

Invite your editorial team and let multiple authors publish articles on the same blog.
