REVIEWS

Most aluminum railing available today use an AAMA 2603 powder coating, while Weatherables aluminum is made with a high-quality AAMA 2604 powder coating. AAMA 2603 powder is much cheaper, which is why many manufacturers use it, but it is only rated for indoor use. AAMA 2604 will give you a longer-lasting finish and helps prevent your fencing from rusting or corroding outside.

Stanford aluminum railing is a great alternative to vinyl and wood railing for your deck, porch or other outdoor space. Available in textured black and textured white finish and all brackets and fasteners are included. Simple to install and low-maintenance, the Stanford aluminum railing is the perfect choice for your home. It provides the strength and durability you are looking for with a sleek design. The Stanford pairs a broadloaf top rail (1.645 in. x 1.720 in.) and a square bottom rail (1.250 in. x 1.375 in.) with 0.60 in. square pickets. It is available in textured black or white color options. The powder coat finish is AAMA 2604 compliant. Comes with a 10 year warranty. The Stanford aluminum railing is International Residential Code (IRC) and International Building Code (IBC) compliant. The Stanford is tested in accordance with ASTM D7032 standards and evaluated by PEI. [Click here](#) to view the Code Compliance Report. Each aluminum railing kit comes boxed with everything you need, including the self-centering brackets and T25 fasteners!
