Cynerio

The Cynerio Platform

Over half of healthcare IoT devices in any given hospital have a critical risk that could endanger patient health and safety if exploited. Most providers struggle to maintain an accurate inventory, let alone combat the threats and risks these crucial medical devices present. This lack of visibility has consequences: 56% of hospitals have had a cyberattack in the past two years, amidst a deadly pandemic that strained resources.

Patient safety is now inseparable from device security, and Cynerio was founded to fix the broken healthcare cybersecurity status quo that has left hospitals so vulnerable. The Cynerio platform goes beyond simple visibility into every connected asset on the network, empowering hospitals to detect and act against threats on IoMT, IoT, OT, unmanaged IT, and mobile devices.
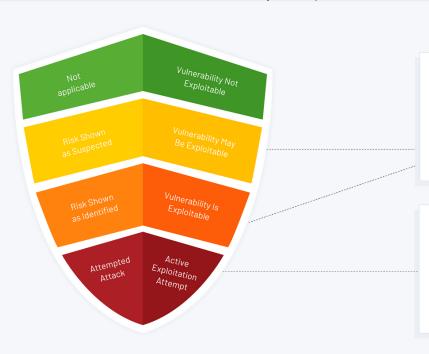

Learn More about IoMT Risk

Cynerio

Preventive Risk Management–

Detects and remediates exploitable healthcare IoT device risk factors that facilitate attacks. Enables micro-segmentation of the healthcare IoT devices on your hospital's network in weeks.

Attack Detection and Response (ADR) –

Identified and stops live attacks on healthcare IoT devices where typical IT security tools offer little visibility or actionability. Stops attacks on day one of deployment.

Download the Platform Brochure

Cynerio Platform Benefits

✓ **Find and remediate all critical healthcare IoT device risks in under 30 days**

✓ **Detects and stops ransomware and breaches on healthcare IoT devices**

Cynerio

✓

Activate automated mitigation and remediation for IT devices that lack sufficient security

✓

Ensure IoT security alignment between BioMed, security, network, facilities, and executive teams
