

ABOUT US

THE PIONEER OF ELECTRONIC SIGNATURE TECHNOLOGY

ZorroSign's vision is to provide the most trusted and secure paperless experience by using disruptive technology.

ABOUT US

Back in the '90s, one of our co-founders introduced an innovative new technology – digital signature. Government agencies and companies that you are very familiar with such as DMV, USPS, UPS, a number of Federated Department Stores, American Express, to name a few, continue to benefit from this technology.

The digital signature also served as a key technology component when President Bill Clinton signed the Digital Signatures in Global and National Commerce Act, also known as the "Millennium Digital Commerce Act" and the "E-SIGN bill" on June 30, 2000.

In 2015, ZorroSign was founded to use the digital signature technology to create a unified platform delivering superior data privacy and security on blockchain. The idea is to provide a highly secure, flexible, seamless, and robust solution to support end-to-end flow of document signature ceremonies for any situation, any industry, any department – for signatories located anywhere and using any device.

Today, ZorroSign is led by CEO and co-founder, Shamsh Hadi. Mr. Hadi manages an international team committed to helping businesses transform the way they secure their digital data and documents. His vision for ZorroSign's data security platform built on blockchain is to protect and empower people around the world to live their digital lives with the highest privacy and security.
