The University of La Verne, in partnership with Telebehavioral Health Institute, Inc. (TBHI), is offering a **Board-Certified Telehealth Professional Level II (BCTP-II) Credential** that consists of approximately 60 hours of online course work and 32 hours of live-instructor led sessions held one night per week for 4 hours.

The **Board-Certified Telehealth Professional Level II (BCTP-II) Credential** program is dedicated to assisting telehealth providers by promoting, opening dialogue, advocating and supporting telehealth adoption across the industry.

## Program Objectives

If you need to develop a telepractice and/or run a day-to-day operation and need help thinking through the issues and their relevance to your setting, this program is perfect for you! In fact, it will help you develop the many competencies required for telepractice by helping you to:

- Explain fundamental terms, concepts and their definitions
- Choose your technology and its specialized features for video conferencing, email, text messaging and other technologies
- Practice legally and ethically over state lines and international borders
- Educate your client/patient about how to be safe when working with you online
- Understand HIPAA, your state laws and those of other states you

The arrival of the COVID-19 pandemic has strained healthcare workers' abilities to support patients. Health service providers need modern solutions, such as increased use of telehealth, to best serve their communities. In response to these needs, the University of La Verne will launch a new telehealth program this August.

In partnership with Telebehavioral Health Institute, Inc. (TBHI), the university will offer a Board-Certified Telehealth Professional Credential program that will help healthcare professionals strengthen their skills in the growing telehealth field. Classes include telehealth clinical best practices for COVID-19 and text therapy.

This program is now open for registration, with classes beginning Aug. 5.

A telehealth certification is geared toward people who work in hospitals, clinics, agencies, or related settings. Those may include counselors, nurses, occupational therapists, physicians, psychologists, and social workers.

The program consists of 60 hours of online coursework and 32 hours of virtual live sessions over an 8 week period, led by a telehealth expert. Participants will earn their Board Certified Telehealth Professional (BCTP-ID) Credential from TBHI upon passing all exams.

Registration will remain open until Aug. 5. Learn more at [laverne.edu/extended-learning/telehealth-professional](http://laverne.edu/extended-learning/telehealth-professional).
