## Alternative Markets Solutions<sup>SM</sup>

Our **Alternative Markets Solutions<sup>SM</sup> (AMS)** is appropriate for insurers that require more efficient portfolio performance, better diversified investments, and easy access to top tier managers, all without adding layers of additional complexity.

Alternative investments offer a number of key benefits, including helping to maximize portfolio potential, lower overall volatility, and hedge against inflation. But there are difficult considerations.

- Which asset classes and allocation size?
- What is the appropriate allocation to illiquidity?
- What characteristics matter most in due diligence?
- How can you be assured you're selecting a top-tier manager?
- How can you access the right manager at an asset size that makes sense for you?
- What are the capital and accounting considerations that are critical?
- How can you allocate to alternatives in the least resource-intensive manner?

We think differently about alternatives access and allocations. Our AMS<sup>SM</sup> Group leverages our truly distinctive framework to cut through this complexity of the asset class universe and deliver to you a portfolio structure that will help meet your needs and protect and grow capital. We:

- Provide insurance expertise and best-in-class manager access;
- Analyze asset class suitability;
- Deliver intelligent, objectives-based portfolio construction;
- Perform robust due diligence and select managers;
- Simplify investing by providing a practical and accessible platform; and
- Support you in your operational needs, including capital and accounting evaluations.

The universe of asset classes is complex. We leverage our insurance expertise, alternative markets knowledge, and industry partnerships to bring our clients clear, customized solutions, all offered in a powerful, easy-to-use package.
