

Close the quote-rejection loop forever

The unfortunate truth is that humans make mistakes. Software does not. That is why we rely on our patented Automated Panel Expert (APE™) system to automate the engineering-to-order (ETO) process. With real-time, as-built quotations and submittal drawings, we help you get the critical information you need to win business versus your competition.

Weeks of stressful engineering and drafting time are reduced to a few automated minutes. Quick turn-arounds on submittals will help you win jobs and also improve your "bottom line" by reducing expensive engineering and drafting time.

STEP 2

ENGINEERING

- With no human interaction, APE™ produces your entire electrical submittal package including "as-built" schematics, CAD layout drawings, and Bill of Materials within minutes.
- In addition, DRC can customize the APE™ submittal formats to fit your customer's needs.
