Azure Active Directory Integration

As organizations rapidly adopt cloud-based solutions, the need for a platform that provides secure authentication and authorization to is critical in order to protect corporate information. Azure Active Directory provides services that allow organizations to easily extend Single Sign On ("SSO") to a large number of cloud services.

Project Scope

This project will include a deployment of Azure Active Directory Connect, Windows Active Directory Federation Services and Azure Multifactor Authentication designed to support the SSO requirements of your organization. This solution can provide the foundation to support both cloud-based applications outside of Azure Active Directory and internal applications exposed to the Internet.

Blue Chip has created a fixed-fee, four-week offering to design and deploy the infrastructure to necessary to support your organization.

Deliverables

// Deploy Azure Active Directory Connect to support provisioning identities to Azure Active Directory

// Deploy Windows Server 2012 R2 Active Directory Federation Services to support claims-based authentication to Azure Active Directory

// Deploy Azure Multifactor Authentication to provide multifactor authentication to Azure Active Directory

Benefits

// Eliminates the need to store passwords in cloud services

// Can provide the right level of security to cloud-based services

// Provides a platform to build SSO solutions

Methodology

| Discover current infrastructure state | Design infrastructure to support requirements | Build and stabilize Azure AD Integration infrastructure | Deploy Azure AD Integration infrastructure |
