

# ARIES · L

BY OSSEUS

## **BONY THRU-GROWTH**

The proprietary multi-axis mesh is designed to facilitate bone fusion throughout the implant.

## **RADIOVISIBILITY**

The multi-access mesh provides unparalleled in-situ radiovisibility of titanium implants.

## **BONY ON-GROWTH**

Post-processing optimizes the implants' micro-surface topology for osteoblasts.

## **POROSITY**

The 80% implant porosity provides optimal biomechanical performance and graft packability.

The Aries-L interbody fusion device features a proprietary multi-axis mesh and optimized micro-surface topology, both of which are designed to facilitate fusion. The product's lattice helps increase the implant's porosity to 80%, which provides unparalleled in-situ radiovisibility compared with other titanium implants. The implant's anatomic profile, anti-migrational teeth, and streamlined insertion promote reduced recovery time by helping increase procedural efficiencies.

## TECHNICAL SPECIFICATIONS

---

### ARIES-L SIZE OPTIONS

---

#### FOOTPRINTS:

20 x 40mm  
20 x 45mm  
20 x 50mm  
20 x 55mm  
20 x 60mm

#### HEIGHTS:

8mm  
10mm  
12mm  
14mm  
16mm

#### LORDOSIS:

0°  
8°  
16°  
24°  
30°

#### ADDITIONAL SIZES:

Additional sizes of the Aries-L can be created within the boundaries listed below:

Width: 16mm-24mm  
Length: 40mm-60mm  
Height: 8mm-16mm  
Lordosis: 0°-30°
