THE DATA SHAREHOUSE IS HERE

INTRODUCING SNOWFLAKE DATA SHARING

Your Data, No Limits

Every organization has data that's worth sharing. However, current data sharing methods like e-mail, FTP, EDI, or APIs are cumbersome, time consuming, and slow, preventing organizations from producing value from their data.

Snowflake has taken an entirely new approach that will revolutionize how people distribute and consume shared data. Now, any enterprise can securely share and govern any part of its data warehouse, with anyone, all without the delays, cost and friction of existing methods.

[SEE THE LIVE WEBINAR](#)

Instant access to ready-to-use data

Data is immediately available for use without delays. Zero transformation, data movement, loading, and record action required.

Live data

Data is always current with no effort required for data consumers to see shared data. Even changes to shared data are immediately available to data consumers with no work required.

Secure, managed access

Data is shared in a fully secure manner that is fully controlled by the data provider.

VIDEO

Sharing data with Snowflake

Watch this short video to see how organizations of all types can escape the constraints of file based data sharing tools with Snowflake Data Sharing. By enabling anyone you wish to securely access your data (instead of transmitting it to them), you can save time, resources, and significantly reduce the burden of data sharing on your customers.

“Before Snowflake, it was a massive endeavor to package up data and send it over the public internet, which isn't always secure. Snowflake eliminated all of this. It's the holy grail of data analytics.”

Robert Fehrmann, Principal Architect
