

# Managed Services @ Velocity

## Mission Critical Systems Management

### Automation/Integration Interfacing

CloudFit Velocity has a growing library of inbound and outbound application interfaces (APIs) that will allow the Velocity platform to automate interaction with existing customer investments.

### Predictive/Adaptive Modeling

CloudFit's device level monitoring components represent the start of a monitoring data pipeline that will securely collect, store and analyze historical monitoring datasets, allowing Velocity to predict and correct system health in real time.

### User Level/Real User Monitoring

CloudFit Velocity software leverages well-defined user level monitors that measure very specific key metrics as users consume cloud services across a multitude of PC and mobile device platforms and operating systems.

### Service Management

CloudFit's market differentiator is our focus on fit-for-purpose Monitoring and Service Management scenarios, with unique features such as Centralized User Interface, Business Impact analysis, Incident notification, Notification rules, and Incident bridge establishment.
