

Sentry Solutions understand that your guns and gear are very important to you. Performance is paramount. Reliability is crucial. If your hi-tech gear jams, disaster may strike. If high value collectables are damaged in storage, your investments diminish. Protection is key.

THE PROBLEM

We looked at the major causes of failure:

- 1) Dirt, dust, and carbon cause fouling during operation of weapon systems.
- 2) The potential for pitting and corrosion while in storage, especially in areas of high humidity or near saltwater these problems multiply.

To combat these, we have been locked into an endless cycle of cleaning and lubricating with oil based products. However, as soon as oils are applied the cycle begins again, since it is the oils that attracts and holds the contaminants.

THE SOLUTION

Our goal was simple – end the cycle of cleaning and protecting with oils by developing a superior way to clean, lubricate, and protect your guns and gear. After years of extensive research, we created a dry lubrication system, that cleans and protects. In fact, Sentry Solutions oil-free gun care practically makes firearms self-cleaning!

HOW IT WORKS

By simply replacing solvents, patches, and wet, tacky oils with our dry, oil-free, CDLPs and lubricants that bond to the surface; Guns and gear operate better. Our products provide a micro bonding shield making metals non-stick, leaving nothing to attract and hold debris. Performance, reliability, and accuracy are enhanced; cleaning becomes as simple as brushing off and re-lubing. Sentry Solutions products will not thicken in the cold or thin out in extreme heat, providing protection in even the harshest environment. You will find that even after thousands of rounds, guns look like they haven't been fired and residue is just blown away.
