## OVERVIEW

ATOM 3.0 is a precise and automatic method for tracking employee/ contractor labor hours using event data from your existing database. ATOM 3.0 provides managers with real-time reporting along with historical views of employee and contractor attendance. ATOM 3.0 eliminates the need for manual data entry, chasing down missing timecards or waiting for labor costs. Timesheets are automatically sent by ATOM to the appropriate individuals for revision and approval thus eliminating the delay in their receipt and impact on payroll. This web-based system allows any approved employee to access the system to check real time cost and hours. ATOM 3.0 is now configured with HID brand of attendance card readers, but can be integrated with any other brand of card reading systems.

## HOW THE ATOM PORTABLE BADGE SYSTEM WORKS
