Now your Phantom Warrior®

SAVES LIVES 2 WAYS!

PHANTOM ResQ

Snap-On Beacon Accessory
for the Phantom Warrior

## DIRECTIONAL COVERT BEAM

360° RESCUE BEACON

We know pilots carry our covert lights to avoid being seen, and a 360° visibility strobe light when they want to be seen. Every piece of gear counts, and COSTS, so we developed a simple optical device to make you safer, and save money as well. The new Phantom ResQ® optic converts your current, covert Phantom Warrior® or Warrior TLS™ flashlight into a powerful, highly visible rescue beacon. The same low-signature flashlight you've used covertly for years can now also identify your position with a 360° light beam emitting either visible or IR light.

The Phantom ResQ® replaces the cord lock on the lanyard on your flashlight. The lanyard remains adjustable as before, but when the need arises (and we hope it never does), just snap the ResQ® onto the top of the light and the most covert of lights becomes the perfect safety beacon utilizing any of the built-in flash modes, or colors, of your light. We've tested this against the Xenon strobes currently in use, the Phantom ResQ® is brighter, and battery life exceeds that of Xenon strobes!

Additionally, when the ResQ® lens is installed, and the Phantom light is used in a steady "ON" mode, it can also be used for temporary TOC lighting or to light a small work area or tent.

ResQ® Installation Procedure

Phantom Warrior supplied with ResQ® lens.

Your Phantom Warrior® or Phantom Warrior TLS™ comes equipped with the ResQ® lens attached to the lanyard. The ResQ® lens remains on the lanyard for use at any time.

Simply unwrap the lanyard to free the ResQ™ for use.

Do not remove the lanyard from the flashlight, or the ResQ® lens from the lanyard.

Place ResQ® lens onto bezel, invert onto hard surface and press into place.

Lightly press the ResQ® lens into the opening of the flashlight bezel.

Invert the flashlight and press the ResQ® lens into the bezel firmly by pushing from the back of the flashlight.

When pressed into the bezel, the light can be worn by the lanyard as usual.

With the ResQ® lens installed, your Phantom Warrior® or Phantom Warrior TLS™ is NO LONGER COVERT. It is now a powerful rescue beacon, visible throughout the hemisphere, with increased intensity along the horizontal.

The Phantom still emits all the flash patterns, INCLUDING the S.O.S. signal, and emits in any color including Phantom White™, any of the visible colors specific to your model of light, or infrared.

To remove, push up with thumb. ResQ® lens will pop off.

To remove the ResQ® lens and return the flashlight to covert use, simply pop the lens off by pushing it upward with your thumb.

The ResQ® lens is a new addition to the Phantom Warrior® and Phantom Warrior TLS™ series of lights. Others around you with older light will notice this new addition. Simply direct them to our website to puchase a ResQ® lens for their existing Phantom Warrior® or Phantom Warrior TLS™.
