

Great News! Over the next few months CrewSafe will be merging into our company and operating under the Spellbound name.

Solving for your X is our why.

The status quo has no place at Spellbound. After all, you can't expect new results by doing the same old thing.

At Spellbound, we approach projects using our proprietary Power Of Many Minds[®] methodology.

Through this creative approach we develop pioneering products and services.

Our team of innovators work hand-in-hand with our clients to add value to their businesses by solving their challenges. Great News! Over the next few months CrewSafe will be merging into our company and operating under the Spellbound name.

We're here to make a difference.

OFFERINGS

OUR TEAM

Great News! Over the next few months CrewSafe will be merging into our company and operating under the Spellbound name.

Design & Development

Our focus turns to your most promising idea and bringing it to life while ensuring your vision and goal are clearly and concisely met. We translate concepts into reality by designing the systems necessary for your team to analyze, test, and evaluate tangible models.

Turning Point

spellbound

Developed by bringing together your team, subject matter experts, and our POMM Team Innovation Leaders in collaborative sessions, this stage shapes your idea into a detailed product, service, or process specification. The teams explore design options and discuss potential challenges.

Team Architecture

We now build a POMM Design and Development Team made up of industry experts, engineers, industrial designers, artists, copy writers, and other creative individuals to inject your idea with a dose of realism.

Evolution

The POMM Design and Development Team begins its magic and develops a preliminary design based on the approved specifications. Utilizing two- and three- dimensional computer modeling and pencil-to-paper efforts, the team creates a number of rough concepts, in addition to producing renderings to show styling and layout alternatives.

Are you really thinking BIG and being DISRUPTIVE to the marketplace?

This process begins to free us from ambiguity. It validates whether the product, service, or process may be technically feasible. It also provides support to the team's level of confidence

that the design will work, and meets your vision and goal before

proceeding to the individual components and creating detailed designs and documents.

spellbound 

Once your team approves the direction, the POMM Team begins identifying and developing each component of the idea, creating digital files that take your idea out of the world of the abstract and into reality. operating under the Spellbound name.

Great News! Over the next few months CrewSafe will be merging into our company and

Transformation

The POMM Team transforms the preliminary digital data into feasibility models and prototypes, conceptual perspectives and 3D illustrations, story boards, presentations, and more, if necessary. Rapid iterations help bring your idea to life and establish your underlying vision and goal.

Your team now has the opportunity to analyze, test, and evaluate your idea for limitations. It also gives you time to obtain end user experience, so you can gain valuable insight before deciding to take your idea to the next level.

“Innovation is the breaking of the wall of thoughts for a remould, yet integrated into everyday living as if it was expected and needed.”

DAVID LANRE MESSAN

Great News! Over the next few months CrewSafe will be merging into our company and operating under the Spellbound name.

Production Readiness

This is the most important part of new product, service, or process development because it focuses on obtaining a consensus from all teams on the current state of production readiness. It addresses areas requiring improvement and provides your decision-makers at all levels with a common understanding of the relative maturity and current risks associated with your new idea.

The POMM Design and Development Team leaders and your team sit down once again side-by-side to clearly refine tolerances, materials, finishes, styling, ergonomics, and the overall look and feel of the final vision and goal.

Detailing

Detail design, or design-for-manufacture, is the stage where each component of your idea is identified, engineered, and documented with digital drawings and specifications. This is done in preparation of manufacturing your idea into a market-ready product, service, or process.

Are you simplifying to yield bottom line dollars?

your goal and vision and to obtain a consensus on the current state of production readiness.

Confirming Vision and Goal

Prototyping, rapid iterations, and user testing are conducted, if necessary. This gives all teams a chance to evaluate, confirm, and approve the product, service, or process to ensure it meets

Your idea is now ready for implementation, production, and launch.

Great News! Over the next few months CrewSafe will be merging into our company and operating under the Spellbound name.

Manufacturing

We offer you complete manufacturing, packaging and distribution services. We strive to provide the highest level of uncompromising commitment to quality while utilizing Good Manufacturing Practices, Certification Assurance programs including ISO, FDA, IEC, EU, Directive 2007/47 EC, NSF, CE, UL, and many others.

We provide most manufacturing related processes including:

spellbound

Industrial/Mechanical Design

Great News! Over the next few months CrewSafe will be merging into our company and CNC Prototyping operating under the Spellbound name.

Silicon Tool

Prototype Tool

Production Tool Fabrication

Precision Machining

Precision Engineering Plastics

EMI/UV/Cosmetic Spray Painting

Finishing Decorations

Ultrasonic Welding

Ultrasonic Cleaning

Sub-Assemblies

Final Packaging
