★ About

If you are a triathlete or time trialist, speed means everything. You probably have just about every aero gadget out there, and eat your Wheaties from a teardrop-shaped carbon-fiber cereal bowl, just like us.

You probably also know that nothing will do more for your speed than an optimal bike fit that gives you the "Big Three": **AERODYNAMICS, POWER and COMFORT** - not just one or two. But how do you know if YOUR fit is optimal?

We are the original digital fit experts for anyone who races against the clock. Aero-position bike fit is totally different than that for a standard road bike. Most bike shops don't know this. Even if they do, they probably fit you using a fit bike and static angle measures.

WE ARE BETTER. We use digital analysis of body angles while you are pedaling under load, which we believe gives a far more accurate picture of your fit. And best of all, we can do it online for far less than a bike shop might charge.

So stop guessing, get fit, and start hammering the competition!
