

synthesis

We are a quantitative investment firm on a mission to unlock potential of [alternative data](#) sources by using machine learning methods in [research process](#) and automating most aspects of investment pipeline, including signal extraction, portfolio optimisation and trade execution. [Our team](#) builds a unified scalable framework that can encompass different asset classes, trading frequencies and geographies. Please [contact us](#) to learn more about our journey.

We are a quantitative investment firm on a mission to unlock potential of [alternative data](#) sources by using machine learning methods in [research process](#) and automating most aspects of investment pipeline, including signal extraction, portfolio optimisation and trade execution. [Our team](#) builds a unified scalable framework that can encompass different asset classes, trading frequencies and geographies. Please [contact us](#) to learn more about our journey.

[Machine learning](#) is merely a tool that allow us to keep our costs down, but our overall investment philosophy is equally applicable to traditional asset managers. As customary in scientific process, getting correct answers depends on having clean and unbiased [observations](#), and studying them in a sequence of [reproducible steps](#) in order to make sense of the data. This is a decidedly old-fashioned approach to what is an age-old problem of making sense of the noise around us.
