🌐 Browser JS

🚀 Welcome to the Magic Browser JS SDK

The Magic client-side JavaScript SDK is your entry-point to secure, passwordless authentication for your web-based app. This guide will cover some important topics for getting started with client-side APIs and to make the most of Magic's features.

👉 Go to our **Getting Started** tutorial to begin your integration

👉 Visit the **API documentation** to learn the methods you'll be using

👉 Go to **Examples** for an introduction to common patterns and use-cases

> ⓘ Magic can support both server-based or serverless web applications. It is up to the developers to implement the **Admin SDK** to validate the DID Token.

Looking for a server-side API? Start with one of these:
