

An architectural rendering of a modern building with a curved, organic form. The building features multiple levels with balconies and a prominent staircase. The design is characterized by smooth, flowing lines and a mix of materials, including what appears to be wood or a similar warm-toned material. The building is set against a clear blue sky and is surrounded by lush greenery, including palm trees and other tropical plants. The overall aesthetic is one of elegance and integration with nature.

I.KI.GAI – Meet our building Construction Team that will be designing and building our condos, restaurants, and hotels. We invite you to relax in these homes and hotels born beautiful while supporting, living, and thriving within the Prospera Platform. Zaha Hadid Architects, with support from AKT II and Hilson Moran Partnership, have crafted an architectural and technological platform to create and curate residential developments that can prosper socially and ecologically in Roatan. It is a specific response to the climate, terrain and environment of Roatan. It embodies the lifestyle choices on offer on the island.
