

## Restore Your Hairline With Scalp Micropigmentation

### WHAT IS SCALP MICROPIGMENTATION?

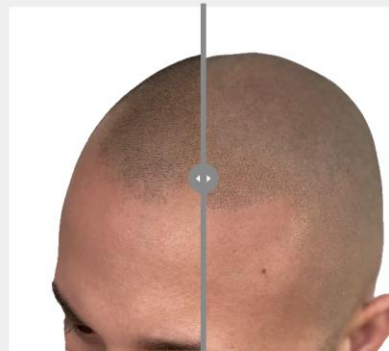

Scalp Micropigmentation (SMP®) is a non-invasive solution to hair loss in which hair follicles are replicated to create fuller-looking hair. STAR Certified Artists apply an organic, charcoal-based pigment to the scalp with micro-fine needles to create thousands of tiny impressions, thus, giving the illusion of short hair. STAR micropigmentation can also be used to enhance an existing hair transplant or provide an alternative to individuals who want a non-surgical treatment suitable for all types of hair loss.

## How does it work?

A S.T.A.R. Scalp Micropigmentation Artist applies specialized pigments using multiple needle sizes and penetration depths, depending on the specific area of the scalp being treated, the skin tone of the individual, and the desired final appearance. The S.T.A.R. technique is a highly advanced form of cosmetic pigmentation. The needles used for S.T.A.R. SMP do not penetrate as deeply as with some other techniques, and we use tested pigments that do not blur or fade overtime. We use micro-fine needles in single and triple clusters to achieve the guaranteed consistency of results that the SMP technique demands.

### Why Be Bald Anymore?

The STAR Micropigmentation technique is a highly advanced form of scalp micropigmentation, not only covering scars, but giving the illusion of a fuller head of hair either by adding density to longer hair, or recreating the look of hair being shaved.

- Scar Camouflage
- Density
- SMP for Women
- Perfect Hair Follicle Replications
- Natural Hair Lines
