1. Draw Vertical lines up and down from where the front legs connect to the bottom of the animal's body.

2. Draw Horizontal lines across the top of shoulders and chest of the animal.

3. Proper Shot Placement is the SPOT right in the middle of this grid.

IMPORTANT: The lines are where they are for a reason! Follow the 1-2-3 instructions. Don't just draw lines without understanding where they belong. Study this side until you are comfortable with the method, then turn the card over and do it yourself on the other side.
